

Global CAD standards are always up to date with Genius Tools Model Processor User

AGCO GmbH

AGCO Corporation and its core brands **CHALLENGER**, **FENDT**, **GSI**, **MASSEY FERGUSON** and **VALTRA** employ about 750 Creo Parametric users across multiple development sites around the world.

Customer Voice

"The increasing number of cross-site projects required us to harmonise our design standards.

However, defining and attuning these global standards was the easy part. The problem was how to implement them reliably. And above all, how to apply them to our legacy data?

*Manually, this would have been simply impossible, but with **GENIUS TOOLS Model Processor User** we have found a proper solution for it.*

No matter which models or assemblies our developers edit – whenever legacy data is affected they can update it to the new CAD standard alongside with a mouse-click.

This way we can ensure constant data quality and also provide our users with additional functionality in a way that couldn't be realised with a default Creo Parametric installation.

*The tool is very easy to configure and errors caused by users are virtually eradicated. This combined with the first class support from **INNEO** has proved invaluable and during roll-out we were surprised by how positive feedback was from the users."*

Andreas Fiderer, Global mCAD Functional Lead, AGCO GmbH

CUSTOMER INFORMATION

AGCO GmbH

www.agcocorp.com

Industry: *Agricultural machinery*

Products: *Tractors, combine harvesters, forage harvesters, balers, self-propelled sprayers, application vehicles, implements, engines*
